Regarding Inhance Technologies' ENKASE™ Barrier Technology and PFAS

Inhance Technologies is a global provider of material science solutions that tailor the surface properties of plastics, elastomers and other molded components for a variety of applications. For plastic packaging, barrier properties are imparted to rigid containers via Inhance Technologies' Enkase™ barrier technology. Inhance Technologies' facilities are ISO 9001:2015 and RC 14001:2015 certified.

Regarding the Enkase™ process:

1. Inhance Technologies has been providing Enkase™, and similar “fluorination” services, for improved barrier, lubrication, and adhesion properties, since 1983. Inhance Technologies serves its customers through an extensive network of facilities in the United States, Mexico, Brazil, Germany and Australia.
2. Inhance Technologies' processes involve the treatment of plastic parts under carefully controlled temperature and pressure conditions, with precise quantities of elemental fluorine (F₂). The resulting modification is a permanent change to the surface of the treated article.
3. In accordance with California Proposition 65 and the European Chemical Agency (ECHA) Substances of Very High Concern (SVHC) List, Inhance Technologies does not use any PFAS or PFAS precursors in any of its processes.
